

Small Animal Science Get to Know You Activity – Day One

We ALL have some past experience with small animals. Some of us have animals at home while others have pet/been around animals. These species range from cats and dogs to chinchilla and ferrets. On a sheet of white paper write your name (first and last) legibly in the center then draw or trace an outline of the animal species you have the most experience with. Fill the rest of the page with examples of your previous (HS quality knowledge) of animals. We will then present to the class as well as display your work.

See example below:

Labrador retrievers have been in the top 10 AKC since their introduction in the 1970's and is currently the number one breed.

Dogs ears and noses are super sensitive to sounds and smells.

All puppies are born deaf.

45% of U.S. dogs sleep in their owner's bed.

Ms. Katie Koepfel

Some dogs are great swimmers, hunters, runners, and more.

Dogs sweat through their paws.

Service Animal Dogs can detect different diseases or even help aid in emotional problems.
